[Percona Toolkit 3.0.10 Is Now Available](#)

Share Link Snapshot Export ✕

A snapshot is a way to securely share your dashboard with Percona. When created, we strip sensitive data like queries (metrics, template variables, and annotations) along with panel links. The shared dashboard will only be available for viewing by Percona Engineers, and the content on the dashboard will assist Percona Engineers in troubleshooting your case.

You can safely leave the defaults set as they are, but for further information:

- **Snapshot Name:** The name Percona will see when viewing your dashboard.
- **Expire:** How long before snapshot should expire, configure lower if required. Percona automatically purges shared dashboards after 90 days.
- **Timeout (seconds):** Duration the dashboard will take to load before the snapshot is generated.

What to do next: After clicking Share with Percona, wait for the dashboard to be generated, and you will be provided a unique URL that then needs to be communicated to Percona via your ticket.

Snapshot name	Prometheus
Expire	90 Days ▾
Timeout (seconds)	30
